Advanced Subsidiary Examination

**PHYSICS (SPECIFICATION A)**  
**Unit 3 Practical**

**PHA3/P**

Tuesday 21 January 2003 Morning Session

**In addition to this paper you will require:**

- a calculator,
- a pencil and a ruler.

Time allowed: 1 hour 45 minutes

**Instructions**

- Use a blue or black ball-point pen.
- Fill in the boxes at the top of this page.
- Answer **both** questions in the spaces provided. All working must be shown.
- Do all rough work in this book. Cross through any work you do not want marked.

**Information**

- The maximum mark for this paper is 30.
- Mark allocations are shown in brackets.
- The paper carries 15% of the total marks for Physics Advanced Subsidiary and carries 7½% of the total marks for Physics Advanced.
- A *Data Sheet* is provided on pages 3 and 4. You may wish to detach this perforated sheet at the start of the examination.
- You are expected to use a calculator where appropriate.
- You are advised to spend no more than 30 minutes on Question 1.

**Data Sheet**

- A perforated Data Sheet is provided as pages 3 and 4 of this question paper.
- This sheet may be useful for answering some of the questions in the examination.
- You may wish to detach this sheet before you begin work.

Answer **both** questions.

You are advised to spend no more than 30 minutes on Question 1.

- 1 Snooker tables are designed so that the height of the cushion around the table is such as to minimise the kinetic energy lost by the ball on striking it.

Design an experiment to investigate how the amount of kinetic energy lost by a snooker ball incident normally on the cushion is determined by the height of the point of contact between the ball and the cushion.

You should assume that the normal laboratory apparatus used in schools and colleges is available to you and that there is a mechanism that enables the height of the cushion to be adjusted.

You are advised to draw a suitable diagram to illustrate the design of your solution to the investigation.

You should also include the following in your answer:

- The quantities you intend to measure and how you will measure them.
- How you propose to use your measurements to determine how the amount of kinetic energy lost by the ball depends on the height of the cushion.
- The factors you will need to control and how you will do this.
- How you could overcome any difficulties in obtaining reliable results.

Write your answers to Question 1 on **pages 6 and 7** of this booklet.

- 2 In this experiment you are required to balance a metre ruler on a prism.  
**No description of the experiment is required.**

- (a) Arrange the metre ruler, prism and wooden block as shown in **Figure 1**.  
Use the open jaws of the clamp to restrict the movement of one end of the ruler.

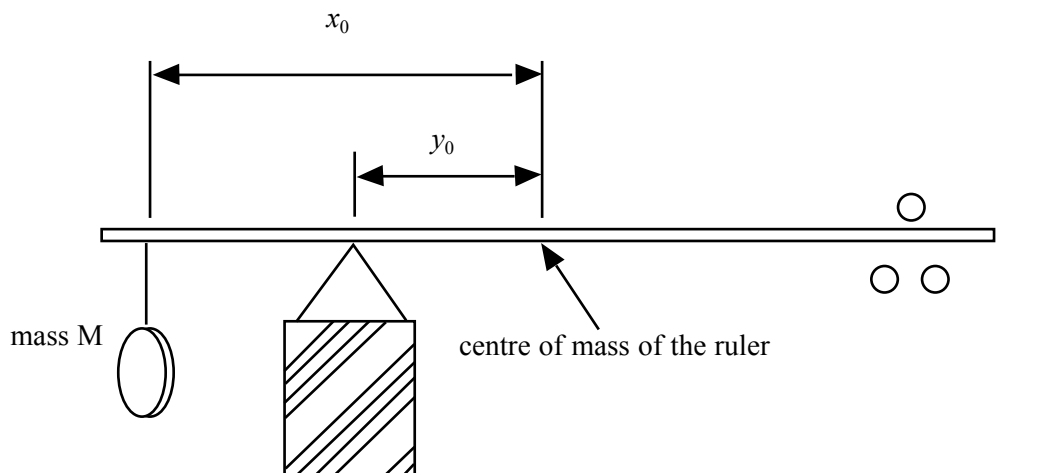

**Figure 1**

Adjust the position of the ruler until it is balanced horizontally on the prism.  
Locate and record the position of the centre of mass of the ruler.

Position of the centre of mass of the ruler = ..... (1 mark)

- (b) Hang the mass,  $M$ , about 5.0 cm from the left-hand end of the ruler and adjust the ruler until it is once again balanced as shown in **Figure 2**.

**Figure 2**

- (i) Measure and record  $x_0$  and  $y_0$ .

$x_0 = \dots\dots\dots$        $y_0 = \dots\dots\dots$

- (ii) Calculate the constant  $k$ , given by  $k = \frac{y_0}{x_0}$

$k = \dots\dots\dots$  (2 marks)

- (c) You are provided with the mass,  $S$ , of a rubber stopper. Record  $S$  below.

$S = \dots\dots\dots$

Hang the stopper on the ruler on the opposite side of the pivot to mass  $M$  so that the mass and the stopper are equal distances,  $x$ , from the centre of mass of the ruler.  
Adjust the position of the ruler until it is balanced, as shown in **Figure 3**.

**Figure 3**

Investigate how  $y$  varies for **five** different values of  $x$ .  
Record your measurements and observations in the space below.

(d) Using the grid **on page 11**, plot a graph of your results with  $y$  on the vertical axis and  $x$  on the horizontal axis.

(5 marks)

(e) (i) Measure and record the gradient,  $G$  of your graph.

$$G = \dots\dots\dots$$

(ii) Evaluate  $\frac{k - G}{k(1 + G)}$ .

$$\frac{k - G}{k(1 + G)} = \dots\dots\dots$$

(f) (i) State and explain which of the measurements that were made to determine  $k$  contain the greater percentage error.
