## A-level PHYSICS

## Paper 1

Time allowed: 2 hours

## Materials

For this paper you must have:

- a pencil and a ruler
- a scientific calculator
- a Data and Formulae Booklet
- a protractor.

## Instructions

- Use black ink or black ball-point pen.
- Fill in the boxes at the top of this page.
- Answer all questions.
- You must answer the questions in the spaces provided. Do not write outside the box around each page or on blank pages.
- If you need extra space for your answer(s), use the lined pages at the end of

Question 2 continues on the next page
The existence of the antineutrino was confirmed by experiments in which
antineutrinos interact with protons. The equation for this interaction is:

$$
\overline{v_{\mathrm{e}}}+\mathrm{p} \rightarrow \mathrm{e}^{+}+\mathbf{X}
$$

| $\mathbf{0}$ | $\mathbf{2} .4$ | $\mathbf{4}$ The positron released in this interaction is annihilated when it encounters an electron. |
| :--- | :--- | :--- |

A pair of gamma photons is then produced.
Particle $\mathbf{X}$ can be absorbed by a nucleus. This produces another gamma ray.
Table 1 contains data for three gamma photons detected during an antineutrino-proton interaction experiment.

| 0 | 3 | Figure 3 shows a garden gate with a pulley system designed to close the gate. |
| :--- | :--- | :--- |

Figure 3

The pulley system raises weight $\mathbf{A}$ when the gate is opened. When the gate is released, A falls. The horizontal cable $\mathbf{C}$ passes over pulley $\mathbf{R}$. The tension in cable C causes the gate to close.

Weight $\mathbf{A}$ is a solid cylinder with the following properties:

$$
\begin{aligned}
\text { diameter } & =4.8 \times 10^{-2} \mathrm{~m} \\
\text { length } & =0.23 \mathrm{~m} \\
