PHY1H

(Specification 4462 / 4451)

Unit 1: Physics 1

Final

Mark Scheme

Mark schemes are prepared by the Principal Examiner and considered, together with the relevant questions, by a panel of subject teachers. This mark scheme includes any amendments made at the standardisation events which all examiners participate in and is the scheme which was used by them in this examination. The standardisation process ensures that the mark scheme covers the students' responses to questions and that every examiner understands and applies it in the same correct way. As preparation for standardisation each examiner analyses a number of students' scripts: alternative answers not already covered by the mark scheme are discussed and legislated for. If, after the standardisation process, examiners encounter unusual answers which have not been raised they are required to refer these to the Principal Examiner.

It must be stressed that a mark scheme is a working document, in many cases further developed and expanded on the basis of students' reactions to a particular paper. Assumptions about future mark schemes on the basis of one year's document should be avoided; whilst the guiding principles of assessment remain constant, details will change, depending on the content of a particular examination paper.

Further copies of this Mark Scheme are available from: aqa.org.uk

Copyright

AQA retains the copyright on all its publications. However, registered schools/colleges for AQA are permitted to copy material from this booklet for their own internal use, with the following important exception: AQA cannot give permission to schools/colleges to photocopy any material that is acknowledged to a third party even for internal use within the centre.

Set and published by the Assessment and Qualifications Alliance.

Information to Examiners

1. General

The mark scheme for each question shows:

- the marks available for each part of the question
- the total marks available for the question
- the typical answer or answers which are expected
- extra information to help the Examiner make his or her judgement and help to delineate what is acceptable or not worthy of credit or, in discursive answers, to give an overview of the area in which a mark or marks may be awarded.

The extra information is aligned to the appropriate answer in the left-hand part of the mark scheme and should only be applied to that item in the mark scheme.

At the beginning of a part of a question a reminder may be given, for example: where consequential marking needs to be considered in a calculation; or the answer may be on the diagram or at a different place on the script.

In general the right-hand side of the mark scheme is there to provide those extra details which confuse the main part of the mark scheme yet may be helpful in ensuring that marking is straightforward and consistent.

2. Boldening

- 2.1** In a list of acceptable answers where more than one mark is available ‘any **two** from’ is used, with the number of marks boldened. Each of the following bullet points is a potential mark.
- 2.2** A bold **and** is used to indicate that both parts of the answer are required to award the mark.
- 2.3** Alternative answers acceptable for a mark are indicated by the use of **or**. Different terms in the mark scheme are shown by a / ; eg allow smooth / free movement.

3. Marking points

3.1 Marking of lists

This applies to questions requiring a set number of responses, but for which candidates have provided extra responses. The general principle to be followed in such a situation is that ‘right + wrong = wrong’.

Each error / contradiction negates each correct response. So, if the number of error / contradictions equals or exceeds the number of marks available for the question, no marks can be awarded.

However, responses considered to be neutral (indicated as * in example 1) are not penalised.

Example 1: What is the pH of an acidic solution? (1 mark)

Candidate	Response	Marks awarded
1	green, 5	0
2	red*, 5	1
3	red*, 8	0

Example 2: Name two planets in the solar system. (2 marks)

Candidate	Response	Marks awarded
1	Neptune, Mars, Moon	1
2	Neptune, Sun, Mars, Moon	0

3.2 Use of chemical symbols / formulae

If a candidate writes a chemical symbol / formula instead of a required chemical name, full credit can be given if the symbol / formula is correct and if, in the context of the question, such action is appropriate.

3.3 Marking procedure for calculations

Full marks can be given for a correct numerical answer, without any working shown.

However, if the answer is incorrect, mark(s) can be gained by correct substitution / working and this is shown in the 'extra information' column or by each stage of a longer calculation.

3.4 Interpretation of 'it'

Answers using the word 'it' should be given credit only if it is clear that the 'it' refers to the correct subject.

3.5 Errors carried forward

Any error in the answers to a structured question should be penalised once only.

Papers should be constructed in such a way that the number of times errors can be carried forward are kept to a minimum. Allowances for errors carried forward are most likely to be restricted to calculation questions and should be shown by the abbreviation e.c.f. in the marking scheme.

3.6 Phonetic spelling

The phonetic spelling of correct scientific terminology should be credited **unless** there is a possible confusion with another technical term.

3.7 Brackets

(.....) are used to indicate information which is not essential for the mark to be awarded but is included to help the examiner identify the sense of the answer required.

3.8 Ignore / Insufficient / Do **not** allow

Ignore or insufficient is used when the information given is irrelevant to the question or not enough to gain the marking point. Any further correct amplification could gain the marking point.

Do **not** allow means that this is a wrong answer which, even if the correct answer is given, will still mean that the mark is not awarded.

PHY1H

Question 1

question	answers	extra information	mark
1(a)	(both graphs show an initial) increase in count rate	accept both show an increase	1
1(b)	only the right kidney is working correctly any two from: <ul style="list-style-type: none"> • count-rate / level / line for <u>right</u> kidney decreases (rapidly) • count-rate / level / line for <u>left</u> kidney does not change • radiation is being passed out into urine – if referring to right kidney • radiation is not being passed out – if referring to the left kidney • <u>left</u> kidney does not initially absorb as much technetium-99 	if incorrect box chosen maximum of 1 mark can be awarded reference to named kidney can be inferred from the tick box it decreases is insufficient it does not change is insufficient	1 2
Total			4

PHY1H

Question 2

question	answers	extra information	mark
2(a)	conduction		1
2(b)(i)	any one from: <ul style="list-style-type: none"> starting temperature (of cold water) pipe length pipe diameter pipe (wall) thickness volume of cold water temperature of hot water (in time) 	temperature is insufficient accept size of pipe accept amount for volume	1
2(b)(ii)	copper greatest temperature change	only scores if copper chosen accept heat for temperature accept heated water the fastest accept it was hottest (after 10 minutes) accept it is the best / a good conductor	1 1
2(c)	the pipe has a larger (surface) area (so) hot / dirty water (inside pipe) is in contact with cold / clean water (outside pipe) for longer	accept pipe is longer	1 1
Total			6

PHY1H

Question 3

question	answers	extra information	mark
3(a)	frequency / pitch decreases	accept wavelength increases accept it / the note becomes deeper / lower it / the note decreases is insufficient quieter is neutral	1
3(b)(i)	(moving) loudspeaker change in sound as loudspeaker moves <u>away</u>		1 1
3(b)(ii)	models can help to explain an effect or theory		1
3(c)	big bang		1
Total			5

PHY1H

Question 4

question	answers	extra information	mark
4(a)(i)	kinetic	do not accept movement	1
4(a)(ii)	thermal sound	accept heat for thermal do not accept noise for sound both answers required in either order	1
4(b)	transferred to surroundings / surrounding molecules / atmosphere or becomes dissipated / spread out	'it escapes' is insufficient accept warms the surroundings accept degraded / diluted accept a correct description for surroundings eg to the washing machine do not accept transformed into heat on its own	1
4(c)(i)	3 (.0 p)	allow 1 mark for correct substitution of correct values ie 0.2×15 allow 1 mark for calculating cost at 40°C (16.5p) or cost at 30°C (13.5p)	2

Question 4 continues on the next page . . .

PHY1H

Question 4 continued . . .

question	answers	extra information	mark
<p>4(c)(ii)</p>	<p>any two from:</p> <ul style="list-style-type: none"> • less electricity needed • fewer power stations needed • less fuel is <u>burned</u> 	<p>ignore answers in terms of the washing machine releasing less energy an answer in terms of the washing machine releasing CO₂ negates mark do not accept less energy is produced</p> <p>accept a correctly named fuel do not accept less fuel is needed</p>	<p>2</p>
<p>Total</p>			<p>7</p>

PHY1H

Question 5

question	answers	extra information	mark
5(a)	C or 0.18 mm		1
5(b)	0.6 (m)	allow 1 mark for correct substitution and/or transformation or 1 mark for changing frequency to Hz answer 600 gains 1 mark	2
5(c)	creates an alternating current	accept 'ac' for alternating current accept alternating voltage	1
	with the same frequency as the radio wave	accept signal for radio wave accept it gets hotter for 1 mark provided no other marks scored	1
5(d)	X-rays cannot penetrate the atmosphere or X-rays are absorbed (by the atmosphere) before reaching Earth	accept atmosphere stops X-rays do not accept atmosphere in the way <u>ignore</u> explanations	1
Total			6

PHY1H

Question 6

question	answers	extra information	mark
6(a)(i)	replaced faster than it is used	accept replaced as quick as it is used accept it will never run out do not accept can be used again	1
6(a)(ii)	any two from: <ul style="list-style-type: none"> • wind • waves • tides • fall of water • biofuel • geothermal 	two sources required for the mark } do not accept water / oceans accept hydroelectric accept a named biofuel eg wood	1
6(b)(i)	any two from: <ul style="list-style-type: none"> • increases from 20° to 30° • reaches maximum value at 30° • then decreases from 30° • same pattern for each month 	accept peaks at 30° for both marks accept goes up then down for 1 mark ignore it's always the lowest at 50°	2
6(b)(ii)	648	an answer of 129.6 gains 2 marks allow 1 mark for using 720 value <u>only</u> from table allow 2 marks for answers 639, 612, 576, 618(.75) allow 1 mark for answers 127.8, 122.4, 115.2, 123.75	3

Question 6 continues on the next page . . .

PHY1H

Question 6 continued . . .

question	answers	extra information	mark
6(c)(i)	(sometimes) electricity demand may be greater than supply (of electricity from the system) or can sell (excess) electricity (to the National Grid)	accept cloudy weather, night time affects supply	1
6(c)(ii)	decreases the current reducing energy loss (along cables)	accept increases the voltage accept less heat / thermal energy lost / produced	1 1
Total			10

PHY1H

Question 7

question	answers	extra information	mark
7(a)	protons, electrons	both required, either order	1
	neutrons		1
	electron, nucleus	both required, this order	1
7(b)	2.7 (days)	allow 1 mark for showing correct use of the graph	2
7(c)	put source into water at one point on bank	accept the idea of testing different parts of the river bank at different times	1
	see if radiation is detected in polluted area or put source into water at three points on bank (1) see if radiation is detected downstream of factory or farmland or sewage treatment works (1)	accept idea of tracing	1
Total			7
